

1310 Optical Module Optical Power

Overview

Center Wavelength 1310nm, Output optical power $\geq 10\text{mW}/10\text{dBm}$, Small signal gain 20dB, Optical fiber interface FC/APC This product is used to amplify optical signals with wavelengths near 1310nm, and can achieve 1290nm, 1310nm single or multi-wavelength amplification. A 1310nm optical module lets you move data efficiently through fiber optic communication networks. As part of the O-band (1260–1360 nm), it balances low dispersion, stable performance, and cost efficiency. This makes it widely adopted in data centers, enterprise backbones, and metro access. *Images are for illustrative purposes. For better user experience, we highly recommend you to update. There are three wavelength windows for 10G optical module communication applications, namely the 850nm window, 1310nm window, and 1550nm window. In practical single-mode. 1310nm Semiconductor Optical Amplifier The SOA is a comprehensive module integrating a pump optical laser and either AGC (automatic gain control) or APC (automatic power control) circuits.
