

Aggregation Switch Optical Port

Overview

Equipped with future-proof fiber-optic and multi-Gigabit Ethernet (mGbE) ports as well as high-throughput uplink and stacking ports, they form the basis for efficient and fail-safe networks. Stacking allows network expansions, redundancy scenarios, and single IP management. With AXIS D8308 Fiber Aggregation Switch you can connect multiple Axis devices using fiber midspans over long distances. Long-distance installations often require fiber optic cables to connect different sites because of. An 8-port, Layer 2 switch made for 10G SFP+ connections. Faster replacement and priority support, covered for 5 years. High-performance 10G SFP modules for optimal connectivity. An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers. All returns must.

Aggregation switch for small and medium-sized campus networks, with 8 x 1GE/10GE SFP+ uplink ports for high-speed data transmission; 24 x 1GE SFP ports (including 8 x combo ports), providing high-speed network experience for long-distance services.
