

# Can an optical module be connected together with an XFP

## Overview

For module-to-module compatibility, It is feasible to interconnect XFP and SFP+ modules with a matched fiber patch cable. With advancements in technologies like the Internet of Things (IoT), server virtualization, cloud computing, and 802. 11ax, the demand for high-speed data transmission has significantly increased. Although higher-speed technologies such as 25G, 40G, 100G, and even 400G Ethernet continue to evolve, 10G solutions remain widely deployed due to their balance of performance, cost, and reliability. Compared with an XFP optical module, an SFP+ optical module has a similar rate but a smaller size. Most SFP+ ports auto-negotiate down to 1G. In this blog, we will list some common questions often asked by module users and give the right answer mainly based on Cisco optical transceivers. It was defined by an industry group in 2002, along with its interface to other electrical components, which is called XFI.
