

Can fiber optic cables be used with a PoE all-in-one router

Overview

Power over Ethernet (PoE) does not work directly over fiber-optic cables because fiber-optic cables are designed to transmit data using light, and they do not conduct electricity. PoE requires copper cables (such as Cat5e, Cat6, or Cat6a) to deliver both power and data. Traditional PoE can now be strengthened by combining the bandwidth and distance advantages of fiber-optic cabling mentioned above with an intelligent power solution enabled by composite cabling. Intelligent power technology paired with smaller “micro zones” could power several 25-watt PoE devices. While in this post, we mainly focus on the PoE system that using fiber optic with power to solve unusual applications specifically in real life, which may need to achieve greater distance, higher bandwidth, or better reliability. In the. The FiberPoE is a low-cost solution for outdoor deployments that require long-distance runs to reach the PoE device.
