

# Effects of ladder-type cable trays

## Overview

Perforated rungs on a ladder-type tray securely fasten cables using cable ties. Additionally, their open design prevents moisture. There are several types of cable trays, including ladder, perforated, solid bottom, basket, and channel trays. Each cable tray type performs a different function and comes in various materials such as aluminum, galvanized steel, and FRP. These rungs are spaced at regular intervals and provide a structure that resembles a ladder—hence the name. Cable ladder systems and cable tray systems shall be manufactured in accordance with BS EN 61537, channel support. A cable tray is built for cable organization, protection, and flexibility. Both are effective cable management systems, yet each has distinct characteristics suited for different applications. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent.
