

Fiber to the Home and Router Connection

Overview

Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled "ONT" or "Fiber"). Fiber optic internet delivers blazing-fast speeds and reliable connectivity, making it a top choice for modern homes and businesses. However, setting up a fiber optic connection to your router can seem daunting if you're unfamiliar with the process. Data travels as light pulses through thin glass or plastic fibers, allowing for high bandwidth capacity and minimal latency. This guide walks you through the complete fiber installation process, from checking availability to optimizing your Wi-Fi network. Fiber to Ethernet media converters adapt between a typical RJ-45 copper Ethernet cable and fiber-optic cable.
