

How to connect the ground wire of the distribution box to the equipment

Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all system parts shall be $<$. The correct connection method of Distribution box grounding wire mainly includes the following steps: 1. The grounding "bus" (grounding bus, PE bus) in the box is directly connected to the power ground wire or grounding system; 2. Preparation: First, you need to prepare some necessary tools, including grounding wire, grounding rod, voltmeter, insulating gloves and insulating tools. The basic rule achieves this through an equipment grounding jumper; four exceptions. The National Electrical Code (NEC) lists eight specific methods to make grounding and bonding connections in Sec. Let's take a look at each one in more detail. **Test the grounding resistance***: Use a.
