

How to interface an XFP optical module

Overview

Slide the XFP module, top side facing upward, into a 10GBase-X port until a connection is made and an audible click is heard (see Figure 2). XFP modules are 10-gigabit modules that convert serial electrical signals to external serial optical or electrical signals. XFP modules can be installed or replaced in an Extreme Networks switch, I/O module, or router without powering off the system. All Extreme Networks XFP modules comply with. The XFP (10 gigabit small form-factor pluggable) is a standard for transceivers for high-speed computer network and telecommunication links that use optical fiber. It was defined by an industry group in 2002, along with its interface to other electrical components, which is called XFI. Non-approved, third party optics are not tested or supported; therefore, Dell does not guarantee proper. Each LSPM1XP2P interface card provides two 10 Gbps XFP fiber ports. Physical Medium Dependent (PMD) sublayer and baseband medium, type 10GBASE-S (short wavelength serial), 10GBASE-L (long wavelength serial), and.

XFP modules are hot swappable and support multiple physical layer variants. They typically operate at near-infrared wavelengths (colors) of 850 nm, 1310 nm or 1550 nm. XFP modules use an LC fiber connector type to achieve higher density. Principal applications include 10 Gigabit Ethernet, 10 Gbit/s Fibre Channel, synchronous optical networking (SONET) at OC-192 rates, synchronous optical networking STM-64, 10 Gbit/s Optical Transport Network
