

Indoor 8-core single-core optical cable

Overview

High-quality LC-LC single-mode (mono-mode) breakout installation cable for indoor (inside buildings). Multi-purpose cable with eight cores in tubes with aramid yarn tightening. Black protection jacket with flexible and extremely tear-resistant pulling aid of nylon material on both. Two popular types of optical fiber cables are 8-core optical cable and 12-core single-mode indoor fiber optic cable. In this article, we will discuss the differences between these two cables in terms of their design, features, and applications. These are cables that are designed to meet both the rigorous environment of the outdoors but also can be routed indoors, where flame rating requirements also apply. This type of indoor outdoor cable eliminates the need for a “transition splice” to an indoor-rated cable when routing an outdoor cable. Indoor, 900nm Tight Buffered, Optical fibre Cable, LSZH, Single mode 9/125nm, 8 Core The optical fibre is made of high pure silica and germanium doped silica. Our high-quality fiber optic cabling solutions ensure seamless data transmission.
