

Inspection of zinc coating thickness of cable trays

Overview

Standards are provided for the amount of zinc coating, specifying an average of 610 gm of zinc per square meter with a thickness of 80 microns. The quality of the zinc coating will be established through testing according to IS-2633 to ensure it is smooth, uniform and. This white paper compares the High Resistance (HR) and Hot-Dip Galvanising (HDG) solutions and highlights the new High Resistance range, ZnAl wiremesh, ZnMg metal cable trays and accessories and ZnNi screws and bolts. Presentation pictures do not always include Personal Protective Equipment (PPE). Cable tray shall be fabricated either from corrosion resistant metal such as aluminum alloy or carbon steel with corrosion resistant coating such as zinc coatings as specified in the data schedule. Importance of Zinc Coating in. Sendzimir galvanized steel sourced from modern galvanizing lines has, in general, a uniform, shiny appearance. Bidder to Supply (MTC should be provided at the time of inspection for review. Indicator BIDDER TO SUBMIT DATA SHEET, QAP, CATALOGUES AND.
