

Kone elevator light curtain interfered with by signal amplifier

Overview

Connect an intermediate relay on the signal line of the safety light curtain, isolate the interference signal. It uses infrared beams to detect obstructions in the doorway, ensuring doors do not close when people or objects are in the way. However, like any technology, light curtains can fail. Elevator troubleshooting is a cause-and-effect process that depends on knowing elevator operation, reading installation, wiring and straight diagrams, and using proper diagnostic tools such as multimeters, clamp meters, insulation testers and manufacturer service tools. Always download error logs. Check for light source interference: Check whether there are interference sources such as strong direct light, welding arc, reflective objects, etc. KCM831 hydro: If between For KCM831 Hydro: Drive floors, elevator returns to Time Supervision of Up bottom floor and is out of Valve. These codes are stored in memory (up to 99 at a time) and help technicians find and fix problems quickly. The latest fault always shows as F1.
