

LTE10G optical module

Overview

A 10G optical module, often referred to as an SFP+ transceiver, is a compact, hot-pluggable device used in network switches, routers, and network interface cards. Its primary function is to serve as an interface between the electrical circuitry of the networking equipment and. SFP+ optical modules are widely used in 10G Ethernet due to their advantages of compact size, low cost and high density, and they are currently the most common 10G optical modules in data centers and enterprise campuses. For example, SFP-10G-BXD1 must be used with SFP-10G-BXU1. If the SFP-10G-ER-1310 is connected. Our Cisco, HP and Brocade ready 10GBASE-SR Multimode SFP+ Modules feature low power consumption (<800mw) using Duplex LC OM3 fiber up to 300m (984'). Our 10GBASE-LR Single Mode SFP+ Modules support even longer link distances up to 10km using Duplex LC OS1 fiber up to 10km for both LAN and MAN. These powerful transceivers are the workhorses that convert electrical signals into light, beaming 10 Gigabits per second of data over fiber optic cables for distances of up to 10 kilometers and beyond. This guide will demystify these critical components, explore their key advantages, and show you. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. FS 10GbE SFP+ module solutions provide a wide variety of 10 Gigabit Ethernet connectivity options for data centers, enterprise wiring closets, Internet Service Providers (ISPs) applications.
