

Local-end optical line terminal equipment

Overview

In the PON technology application, OLT equipment is an important local-end device, which achieves the following functions. connect with the front-end (aggregation layer) switch with network cable, convert into optical signal, and interconnect with the splitter at the. An optical line termination (OLT), also called an optical line terminal, is a device which serves as the service provider endpoint of a passive optical network. Modern OLTs offer communication service providers (CSP) the ability to launch multigigabit services to tens of thousands of subscribers from a single location or just ten. This system facilitates multiplexing of data streams. The VCL-E3 & E1-OLTE is a 34Mbps & 2. 048Mbps Optical Line Transmission Equipment which converts and transports a ITU-T compliant standard E3, 34Mbps signal and E1, & 2. The optical link, between two OLTE terminals is established on one pair of optical fibers.
