

Low-loss operation and maintenance of GPON equipment

Overview

A complete reference of OLT configuration, troubleshooting, and monitoring commands for GPON/EPON devices (ZTE, Huawei, V-SOL, etc.)This document describes the Gigabit Passive Optical Network (GPON) technology and how it functions. There are no specific requirements for this document. In order to ensure the stable and healthy operation of the equipment, it is necessary to pay attention to the standardization of daily routine maintenance work, and to keep abreast of the equipment. GPON (Gigabit Passive Optical Network) can experience various errors and alarms affecting performance. Here is a comprehensive list of common GPON errors and their typical causes: Regular Maintenance: Conduct periodic inspections, clean fiber connections, and replace aging equipment. These mechanisms cover everything from physical layer control to high-level service management, offering comprehensive monitoring, configuration, and. A complete multi-vendor reference for GPON/EPON OLT configuration, monitoring & troubleshooting.
