

# Mobile fiber optic router speed halved

## Overview

Restarting your router is one of the easiest ways to resolve minor internet speed issues. Often, these devices just need a fresh reboot to clear out temporary glitches and restore your connection to full speed. Wait for about 60 seconds to make sure it fully. With upload and download speeds that often exceed 1,000 Megabits per second (Mbps), fiber optic internet has the capacity to provide a seamless online experience while powering all of your connected devices at once. Here's the. There are few things more aggravating than paying for a high-speed internet connection and only getting half the speed. I was expecting dl speeds of 900+ on wired connection and 600+ on wifi when close to router, what I am getting is 100 (dl) on wired and max of 350mb on wifi when sitting on top of the router, other rooms in my apartment are. The Internet provider was out today and confirmed speeds to the house- and in front of the router- are 900+. I watched the speed tests being performed. However, it was confirmed behind the router the speeds are, in fact, similarly diminished and nearly identical to what I am seeing via two desktop. Deco slow internet is a common frustration, but the cause is usually one of three things: unit placement, a device limitation, or a testing method that produces misleading results.
