

Multimode fiber optic splitter 1 to 2

Overview

MMC (Multimode Couplers) or fiber optic splitters, are Multimode FBT (Fused Biconical Splitter) Splitters with a defined split ratio from one input fiber to 2 output fibers. Couplers fabricated from graded-index (GRIN) fiber are available with Ø50 µm or Ø62. Featuring advanced filtering technology, it efficiently distributes the input signal across two output ports, ensuring stable and high-performance. Lfiber's symmetric multimode fiber optic PLC splitter is a passive optical device used to split incoming signals into two or more output signals. They're capable of operating over a broad wavelength range from 650 nm to 1350 nm (Typ. FBT Multimode couplers are available with 900µm loose tube single-mode fiber or 250µm bare fiber and are terminated or. Newport's Fiber Optic Coupler family has been developed using fused fiber technology. Not designed for combining optical signals. Can be used as alternate inputs when designing for.
