

# Paraguay Fiber Optic Distribution Frame 24 Cores

## Overview

The ProLink PL-ODF24 is a rack-mount fiber optic distribution frame designed to organize, terminate, and manage up to 24 fiber connections in structured network installations — ideal for FTTx, data centers, telecom rooms, and LAN/WAN backbone networks. Optical Distribution Frame (ODF) is a device used in fiber-optic telecommunications networks to connect, manage and distribute optical fibers from incoming and outgoing cables. It acts as a distribution point for fiber-optic cables in a central office, data center, or other communication. DIGISOL Optical Distribution Frame provides cable interconnections between communication facilities that can integrate fiber splicing, fiber termination, fiber optic adapters and connectors in a single unit for High-Density capacity designed for 24 core to 144 core. Easy installation for individual. Fiber Management Tray also called ODF Distribution Box, Integrated Splicing and Distribution ODF. Users can select unit or ring flange amount according to their practical needs.
