

# Phase loss sequence relay protection device

## Overview

A phase sequence relay is an essential protective device used in three-phase electrical systems to monitor and ensure the correct phase sequence, detect phase loss, and identify phase asymmetry. It prevents damage and operational issues caused by incorrect wiring or faults in the. Protection relays are essential devices that act as circuit breakers when faults are detected in electrical circuits. They provide detection of abnormal operating conditions such as phase loss, phase sequence, and phase asymmetry. One SPDT output relay, 6 A at 250 VAC (resistive load). Output status can be monitored using LED indicator. With over 40 years of. The MP8000 is an advanced motor protection electronic overload relay that is fully programmable via Bluetooth\* using an iPhone\* or Android\* smartphone or tablet with the Littelfuse App. and accurate protectionrelays for every type of start. For 3- phase. Selec PSR monitors AC voltage, protecting equipment from phase failure, reversal, imbalance.
