

Relay Protection for AC DC Hybrid Networks

Overview

With the national new energy policy, AC DC integrated distribution network is more and more common, in the AC DC hybrid grid, the interaction between AC and DC side will lead to complicated fault characteristics, which further affect the relay protection system strategy . With the national new energy policy, AC DC integrated distribution network is more and more common, in the AC DC hybrid grid, the interaction between AC and DC side will lead to complicated fault characteristics, which further affect the relay protection system strategy . electronics equipment. Therefore, it is of great significance to study the adaptability analysis of AC-DC hybrid distribution network protection to ensure the safe and reliable operation. Studies have indicated, protection notwithstanding, that embedded MVDC can be used to provide economically attractive.
