

Remote KVM Switcher

Overview

A remote KVM switch is a network device that enables users to manage multiple computers or servers from a remote location via a network connection. The ClimatePartner certified product label confirms that a product meets the requirements for the five steps in climate action including calculating carbon footprints, setting reduction targets, implementing reductions, financing climate projects and communicating transparently to continuously. Emerald® KVM matrix system delivers pixel-perfect HD or 4K video over a dedicated or existing IP network. Users can control connected systems using a single keyboard, monitor, and mouse, regardless of physical distance, and can even manage devices across. Control multiple computers with one keyboard, mouse, and monitor using our recommended KVM switches, with setup guides, troubleshooting tips, and security considerations for work and home office environments. Our five generations of products are in operation in 50,000 locations worldwide. Leverage our technology, expertise and support for your KVM and remote access needs.
