

Safety Standards for Optical Power Meters

Overview

IEC 61315:2019 is available as IEC 61315:2019 RLV which contains the International Standard and its Redline version, showing all changes of the technical content compared to the previous edition. IEC 61315:2019 is applicable to instruments measuring radiant power emitted from sources. It is intended for use with communications equipment. In particular, publications cover with the technical requirements of ISO/IEC 17025. IEC 61315 defines all the steps involved in. EXFO can help save both time and costs with an automated calibration test system that is designed for the verification of power meters, attenuators, sources and optical time-domain reflectometers (OTDRs). To augment the absolute power measurements NIST provides nonlinearity, spectral responsivity, and uniformity measurements. " To obtain maximum performance from the instrument, please read this manual first, and keep it handy for use during shipping. If damage is evident, or if it fails to operate according to the specifications, contact your dealer or EXFO prior to shipment.
