

The bracket on the mounting plate of the distribution box

Overview

The bracket includes four precisely located M6 mounting studs (or clearance holes) that align with the original distribution box mounting points, ensuring that the box sits at the correct height and angle for harness connector access. Mounting brackets are hardware products used to attach electrical wiring and switches to walls and studs during building construction and interior work. With this structure, we can install the components of irregular heights easier and faster. All the components, wires and connections are under the protective cover due to the same height. For universal mounting on all enclosures and mounting parts with system punchings on a 25 mm pitch pattern. 51", Height: 5", Width: 5-3/4", Thickness: .028", Quantity: 100 pc
