

What is the typical amperage rating of a PDU used in a network server rack

Overview

The full amperage rating for the PDU (derated) is 16 amps, 24 amps or 48 amps, depending on the line cord. In some jurisdictions, electrical codes require an amperage derating. Common Types of Rack PDU. We have both AP8861 20A (for servers) and AP8941 30A (for network equipment) PDU's and I am trying to calculate how much load the equipment in each rack will use, I can then plan where everything can go. I used the calculation $W/V=A$ - using the. In North America typical circuits have a maximum current carrying capability, and use circuit breakers or fuses rated at, 15A, 20A, 30A, etc. In other words, a PDU with a 20A fuse will blow or a 20A circuit breaker will trip if a 20A circuit experiences more than 20A of current for some period of. The common "30 amp" rating is known as a maximum rating. IBM currently provides multiple PDUs—the 9188/7188, the 5889/7109, the 7196+ and the new intelligent PDUs (they all start with EP).
