

What kind of panel do you need if you have fiber optic internet

Overview

A fiber optic patch panel is a central hub where incoming and outgoing fiber cables connect, organize, and route signals across your network. It provides a structured interface between your equipment and your cabling — allowing quick changes, easy troubleshooting, and safer cable. Choosing the right fiber optic patch panel is one of the most important decisions you'll make when building or upgrading a fiber network. With the growth of the fiber industry, a wide array of fiber optic patch panels have been developed to fit the many needs of these varying environments. If you already know what your project requires, check out our complete Fiber Patch Panel selection. A fiber optic patch panel or wall mount enclosure not only enables electricians and network engineers to connect and manipulate cables, it also offers a safe working. Fiber-optic internet connections are by far the fastest and most reliable type of internet connection you can choose, but getting those precious beams of internet light to your devices can be quite an ordeal.
